Educational Objectives

This publication/activity is designed to provide trauma care professionals interested in the treatment of critically ill trauma patients with a regular overview and critical analysis of the most current, clinically useful information available, covering strategies and advances in the diagnosis of traumatic injuries and the treatment of trauma patients. Controversies, advantages, and disadvantages of diagnosis and treatment plans are emphasized. There are no prerequisites for participation in this activity.

After reading each issue, participants should have a working familiarity with the most significant information and perspectives presented and apply what they have learned promptly in clinical practice. Specific learning objectives are listed at the opening of each article.
